

CoastalFlow™
GAS MEASUREMENT, INC.

Operation Eagle Ford Shale Gas-Tech

Dear Candidate,

As the oil fields of Texas continue to produce vast amounts of oil and gas, they're also producing a wealth of employment opportunities, especially in the Eagle Ford Shale area. One recent study suggests that this region, located in South Central Texas, has already created roughly 10,000 new jobs, and projects the creation of an additional 60,000 jobs over the next several years. While energy companies are literally searching high and low to fill a wide range of positions, one category that could use more than a few good men and women is the field of natural gas measurement.

In recognition of this opportunity to demonstrate our appreciation to all veterans while helping our industry to fill a critical need for skilled technicians, Coastal Flow Measurement, Inc. is launching an ambitious program to recruit and train qualified returning military personnel for a career in natural gas measurement...and we will assist those who successfully complete our training program in obtaining full-time employment. For those accepted into the program, Coastal Flow will provide Phase I and Phase III training, including meals, lodging, and all course materials, at no cost! Phase II will entail a three-month apprenticeship program with your future employer.

The initial Phase I training program will last approximately 2 weeks and will be conducted in our Houston, Texas training facility during March 2012. Attached for your review is our training agenda. If you're interested in applying for this opportunity to train as a natural gas measurement technician, please send your resumé and DD 214 by e-mail to WelcomeHome@coastalflow.com. We'll be honored to consider your application. For more information concerning natural gas and liquid measurement services in our industry, please visit our website at WelcomeHome.coastalflow.com or www.coastalflow.com.

Good luck, God bless you, and thank you for your service to our country.

Sincerely,

Mark Fillman
Chief Operating Officer

P.S. Thanks, in advance, for corresponding with us strictly through e-mail for now since phone communications may be too demanding and inefficient over the near-term.
